

Fibreveil Surface Shield

Fibreveil is a nanotechnology-based fabric protection coating that forms an invisible, breathable barrier on individual fibres to help repel water- and oil-based spills and reduce staining risk in high-use office areas.

Key Benefits

- Water resistance to help defend against everyday spills.
- Invisible + breathable: no visible change to appearance
- Water-based, fluorine-free; eco-friendly, non-toxic, non-flammable, and odourless for indoor use.
- Suitable across natural and synthetic fabrics

This is our office-focused fabric protection service for high-use workplace environments applied to office carpets, fabrics, and soft furnishings such as reception seating, meeting room chairs, breakout booths, and collaborative areas.

It is designed to support protecting presentation standards in spaces with constant occupancy and frequent spill risk. In practical terms, spills are more likely to bead on the surface, giving teams more time to respond before staining occurs.

New Product Protection

New furniture, seating, and soft furnishings benefit from protection from day one. We provide a managed product protection service designed for newly installed workplace assets, helping reduce the impact of spills, staining, and everyday use from the outset. Applied as part of project delivery or post-installation support, the service helps clients protect presentation standards, support asset longevity, and maintain cleaner, more resilient environments across offices, meeting spaces, and breakout areas.

- **Protects new assets** against spills, staining, and everyday soiling from first use
- **Supports presentation standards** in newly completed or recently refreshed spaces
- **Improves ongoing cleanability** and helps maintenance teams respond more effectively to incidents
- **Contributes to asset life extension** by reducing early visible wear and marking
- **Ideal for handovers and post-fit-out protection** in client-ready spaces
- **Supports a more sustainable approach** by helping new furniture stay in better condition for longer

Existing Product Protection

Existing furniture, seating, and soft furnishings often stay serviceable long before they look their best. We provide a managed product protection service for in-use workplace assets, helping reduce the impact of spills, staining, and everyday wear while supporting cleaner, more resilient environments. Applied as part of planned maintenance, post-cleaning treatment, or wider workplace refresh programmes, the service helps clients protect presentation standards, extend asset life, and get more value from furniture already in place.

Key Benefits

- **Cuts replacement costs** by extending the life of existing furniture
- **Protects asset value** and improves return on prior spend
- **Reduces lifecycle cost** from spills, stains, and daily wear
- **Helps defer capital spend** on new furniture
- **Reduces waste and disposal** across workplace assets
- **Supports ESG goals** through life extension and reuse
- **Improves sustainability outcomes** without major operational disruption
